Deep Learning on Azure

Dr. Tim Scarfe

Data Solution Architect / Data Scientist

tim.scarfe@microsoft.com / @ecsquendor

Microsoft

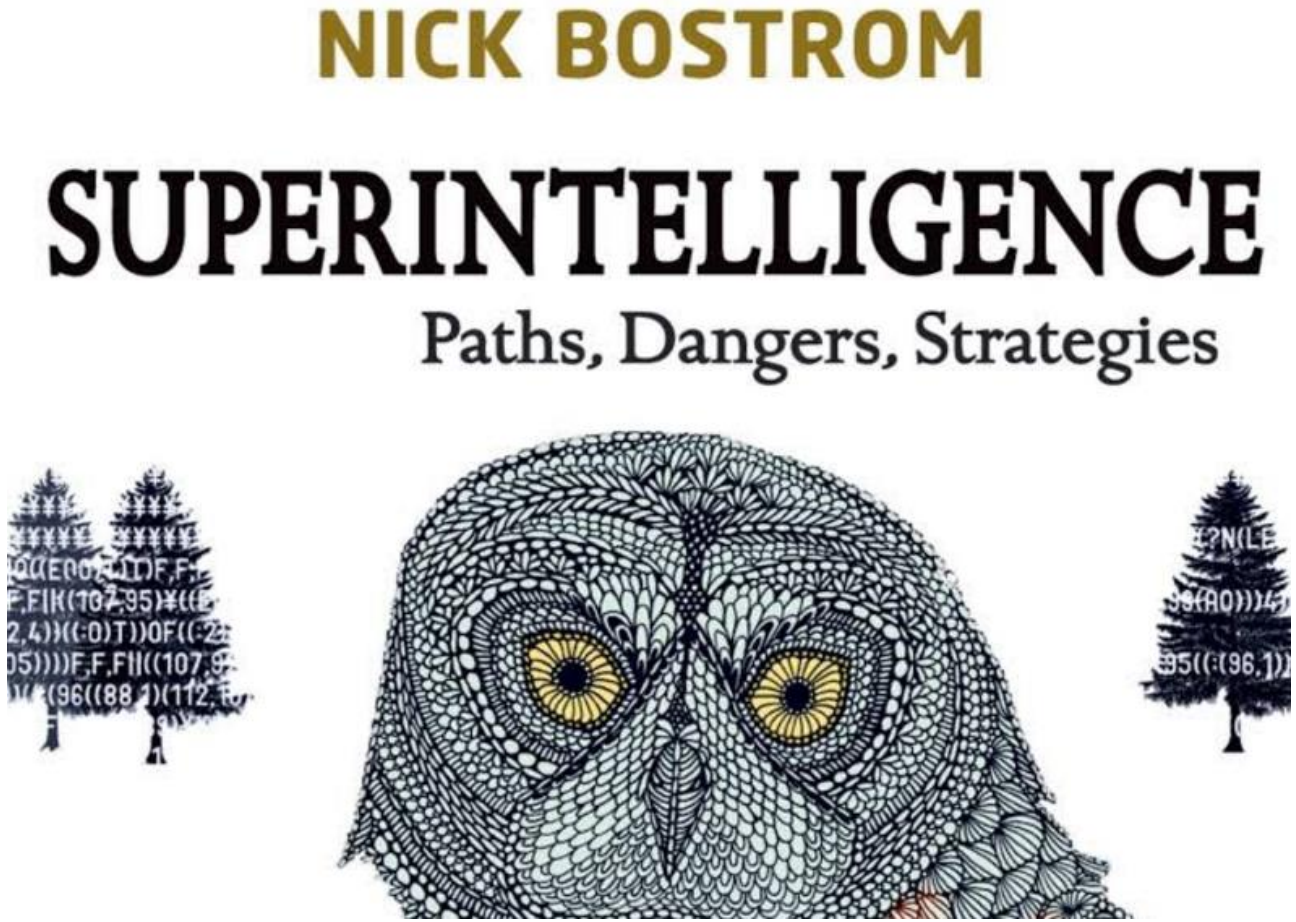
"Our goal is to democratise AI to empower every person and every organisation to achieve more."
Satya Nadella

WHAT IS MACHINE LEARNING?

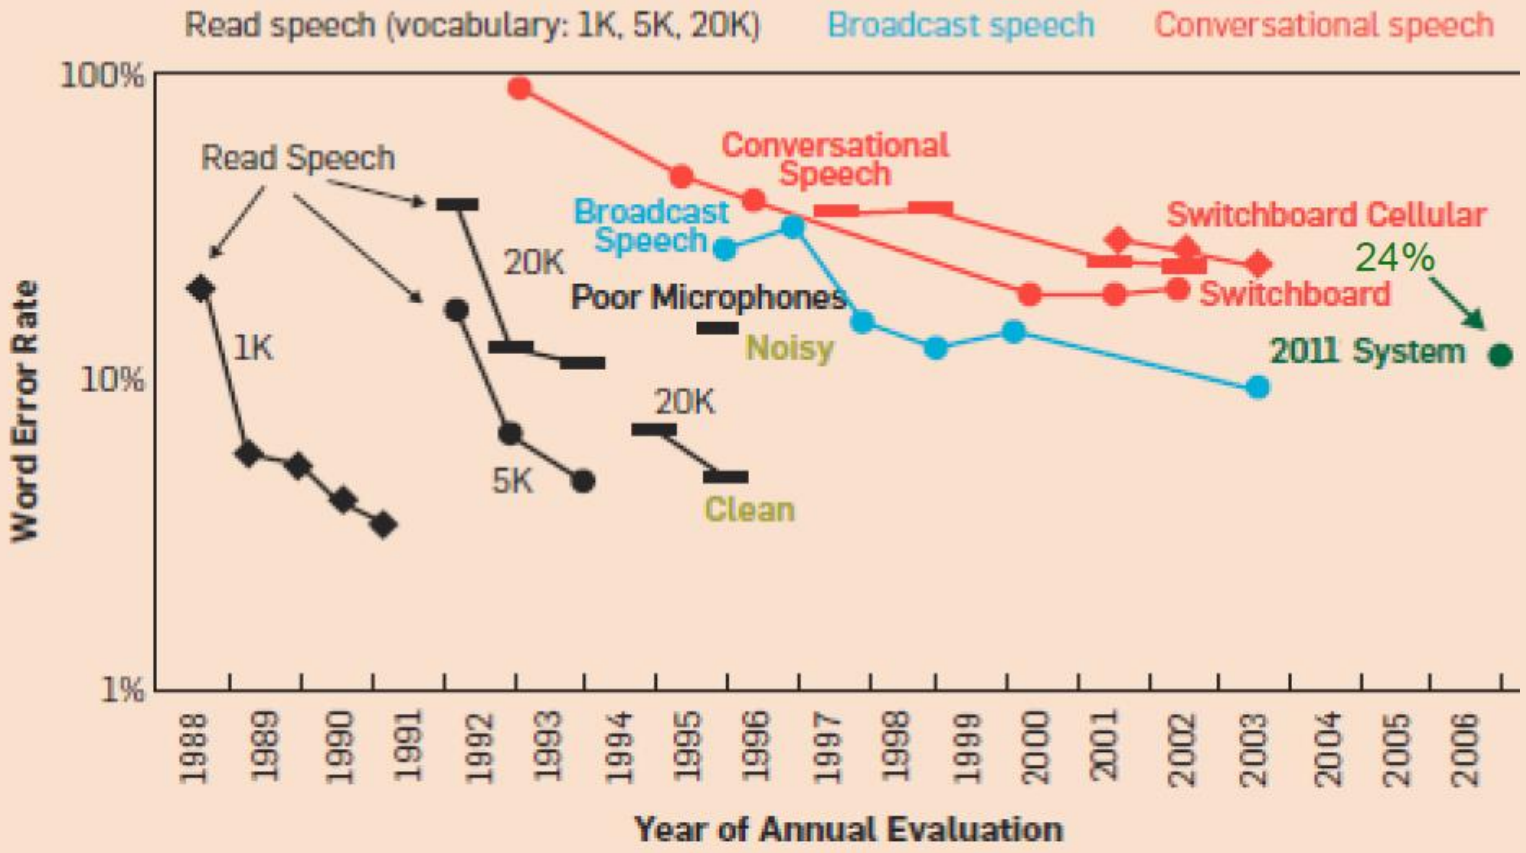
Machine learning is about learning from previous experience so you can make accurate predictions about the future.

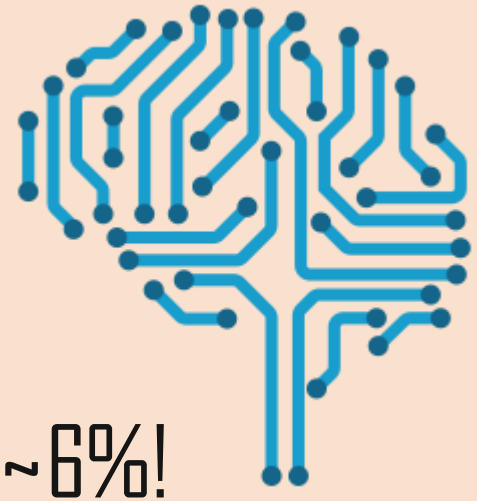
Microsoft

DATA EXPLOSION = SMART AI



DON'T WORRY ABOUT SUPERINTELLIGENCE



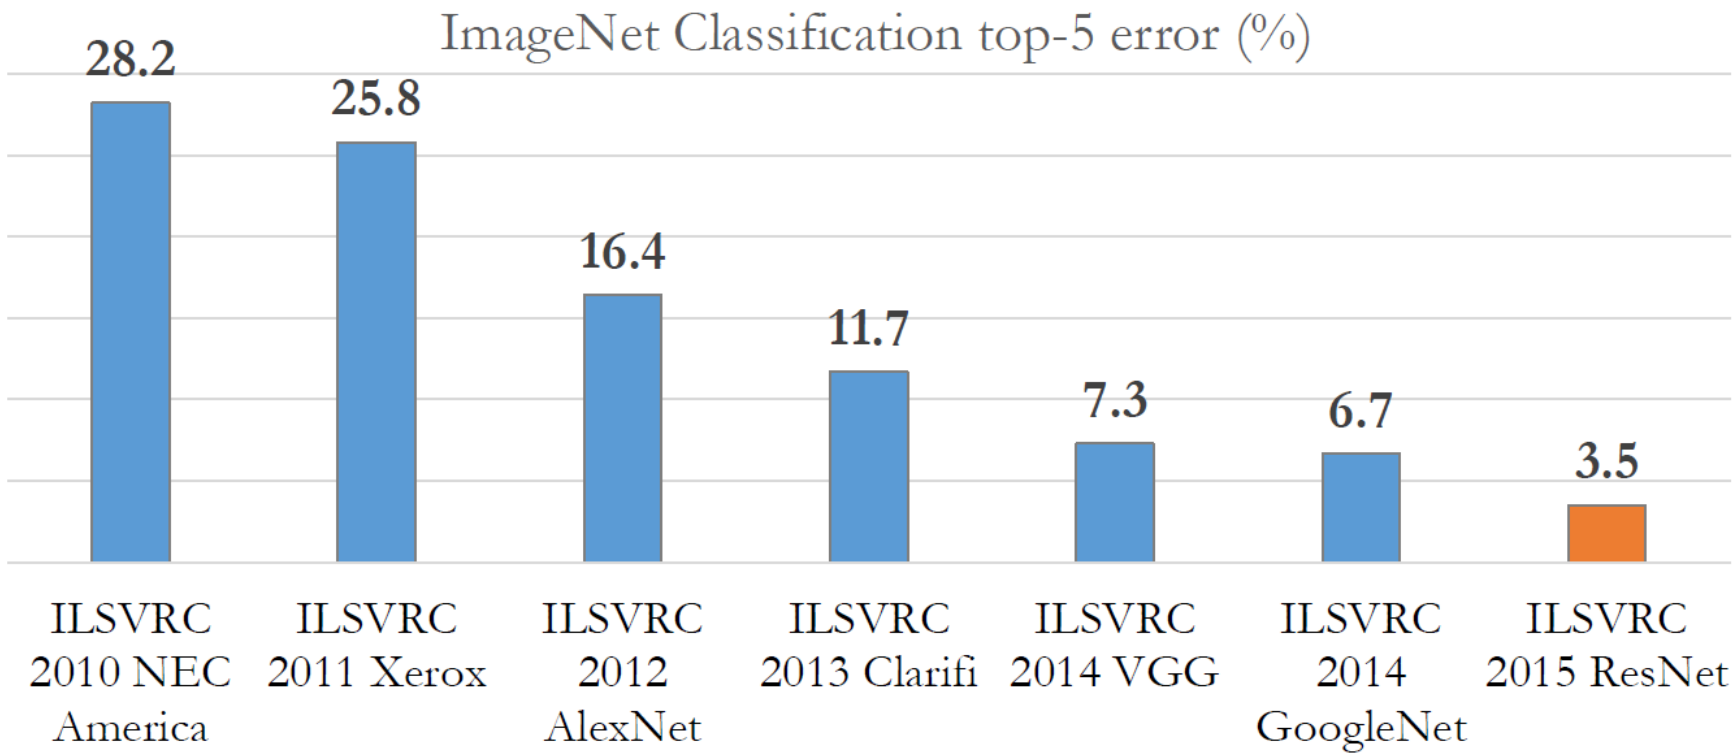


2017: ~6%!

Human error: ~5%

IMPROVEMENTS IN SPEECH RECOGNITION

IMPROVEMENTS IN COMPUTER VISION



2017: ~2.2%

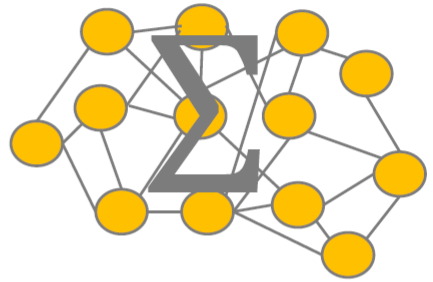
Microsoft

Machine Learning/AI Stack at Microsoft

Cognitive Services

Azure
Machine Learning

Data Science
Languages



Cognitive Toolkit (CNTK)

Project "Vienna" (2018)

SaaS (REST)

PaaS (Drag/Drop)

Code
(R vs Python)

- We are #1 contributors to open source
- Platinum member of the Linux foundation
- We support all main deep learning frameworks
- You don't have to use CNTK if you don't want to
- Project "Vienna" will support all execution environments on-prem and cloud (cloud/containers/Spark)

THE NEW MICROSOFT

Batch vs. on-line

Regression

Predicting sequences/images

Supervised

Classification

Anomaly Detection

Unsupervised

Clustering

Agent Based Learning

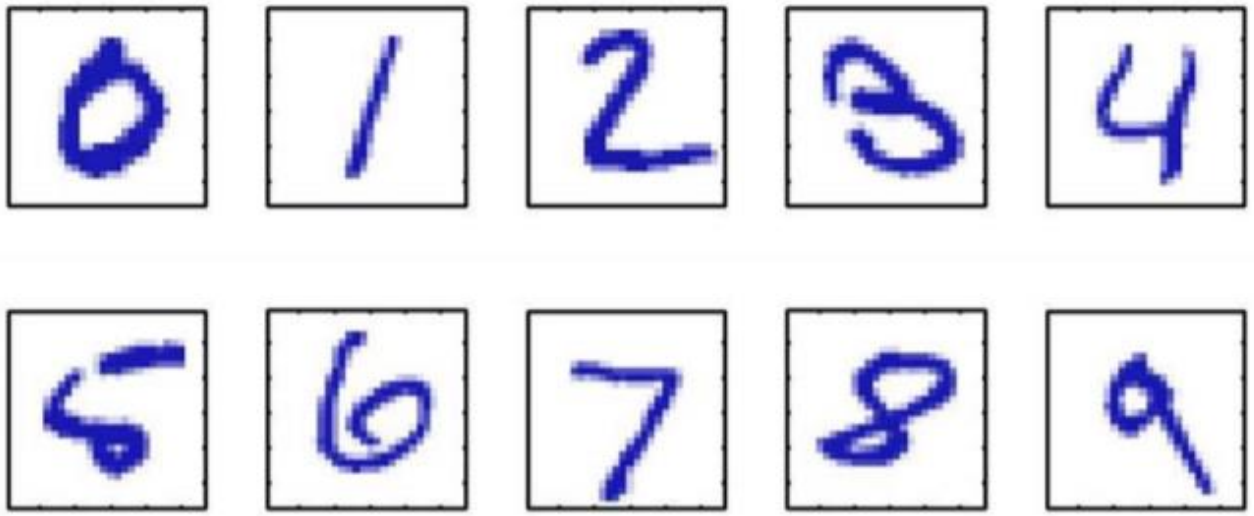
Reinforcement Learning

TYPES OF MACHINE LEARNING

- Approximate a function which maps from signals (image) to labels (has-cat)
- This “decision function” can predict missing labels on new, previously unseen signals.
- Historically; different algorithms for different tasks
  - now; deep learning does everything

WHAT DO MACHINE LEARNING ALGORITHMS DO?

MNIST Digit Classification



Images are 28 x 28 pixels

Represent input image as a vector $\mathbf{x} \in \mathbb{R}^{784}$

Learn a classifier $f(\mathbf{x})$ such that,

$$f : \mathbf{x} \rightarrow \{0, 1, 2, 3, 4, 5, 6, 7, 8, 9\}$$

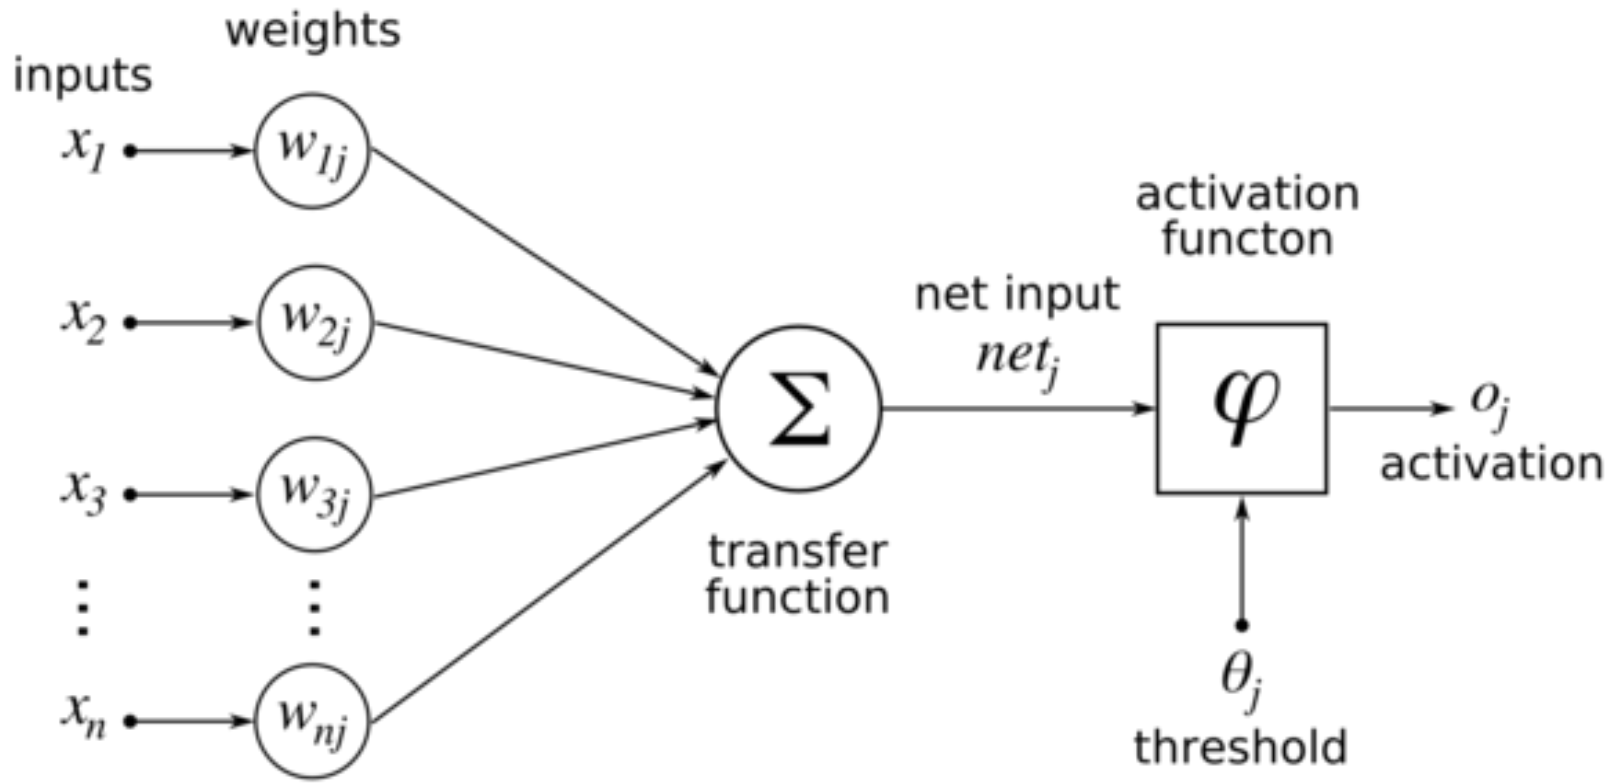
Signals

Labels

DEEP LEARNING/NEURAL NETWORK DISCUSSION

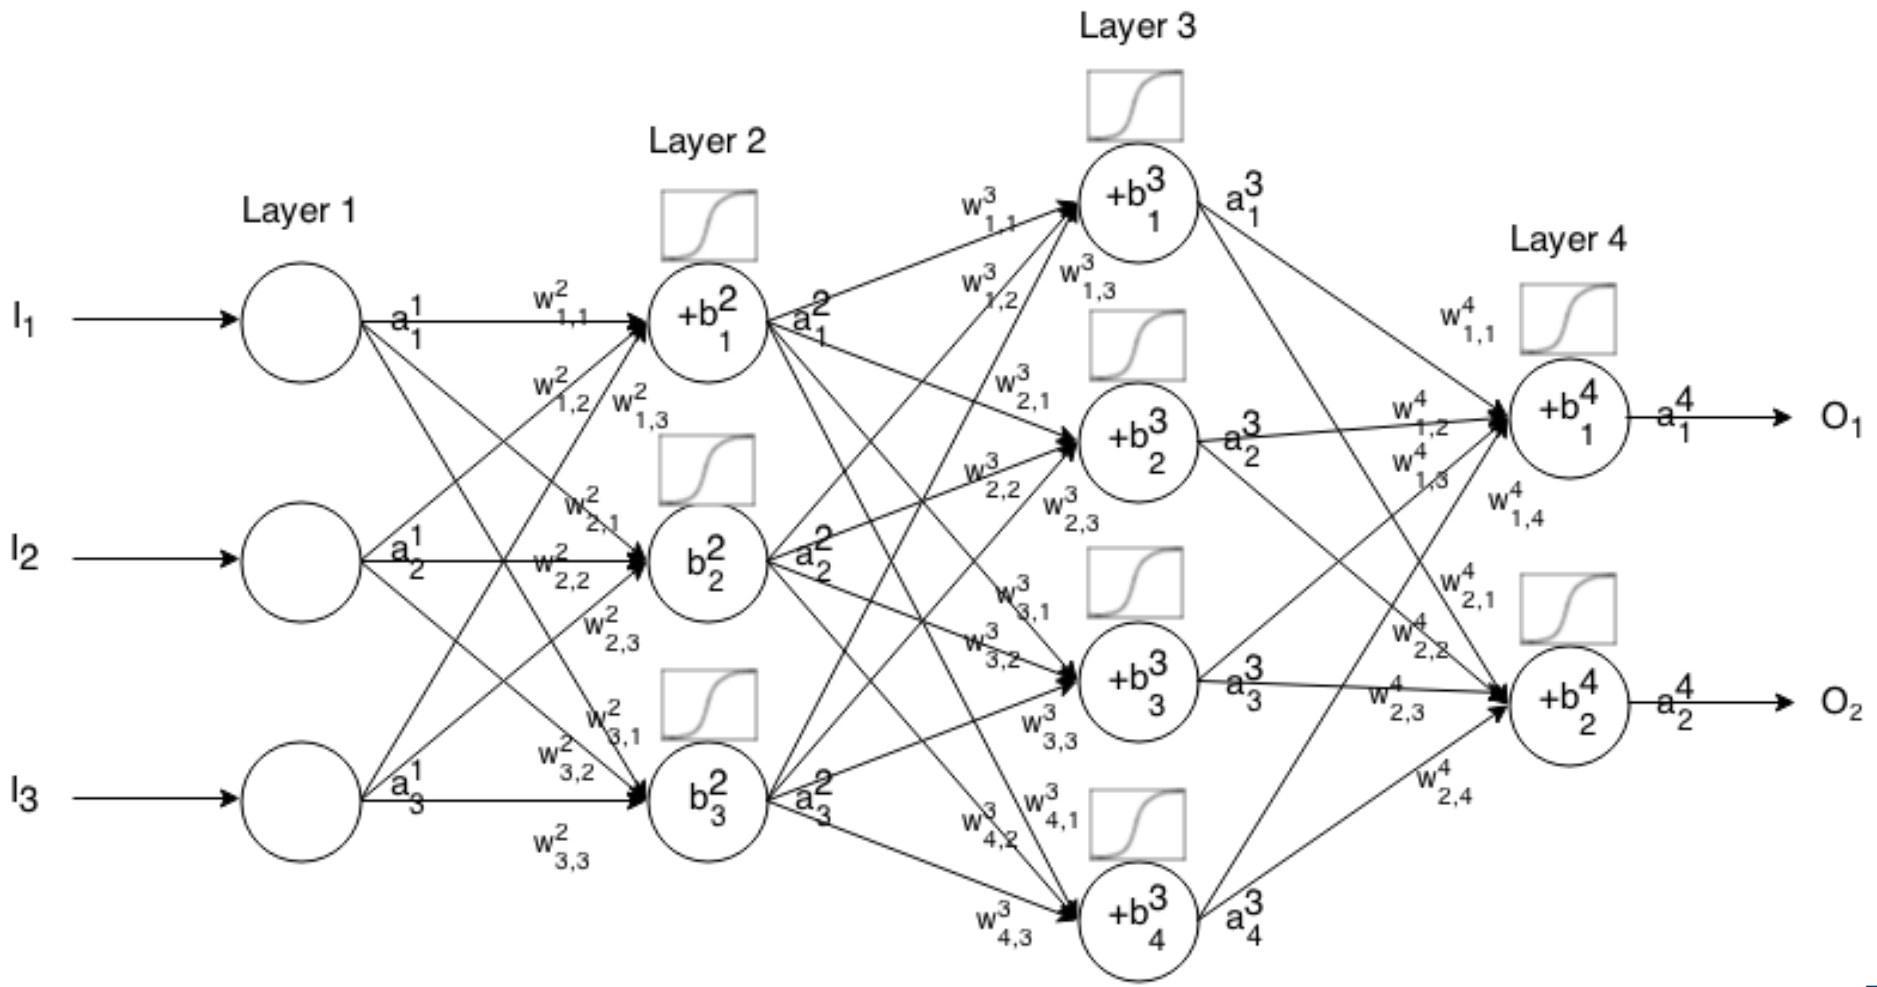
- Deep Learning = Neural Networks
- Actually, an old technology!
- Universal function approximators; extremely flexible prediction scenarios
- Less emphasis on feature extraction
- Got seriously popular after 2012 due to data+compute explosion
- Particularly good for vision, speech, RL and NLP

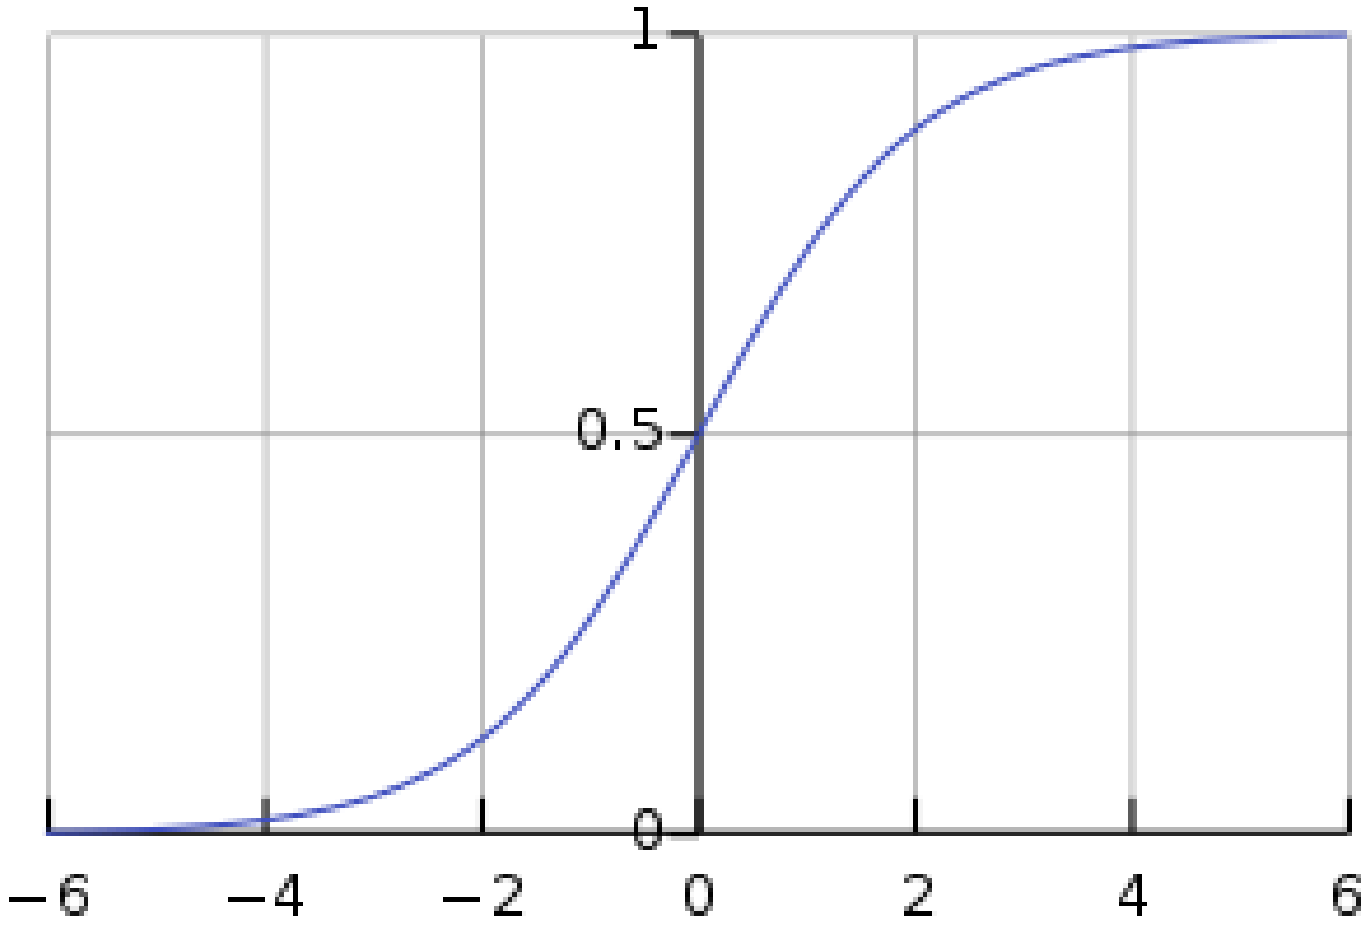
WHAT ARE NEURAL NETWORKS?



Microsoft

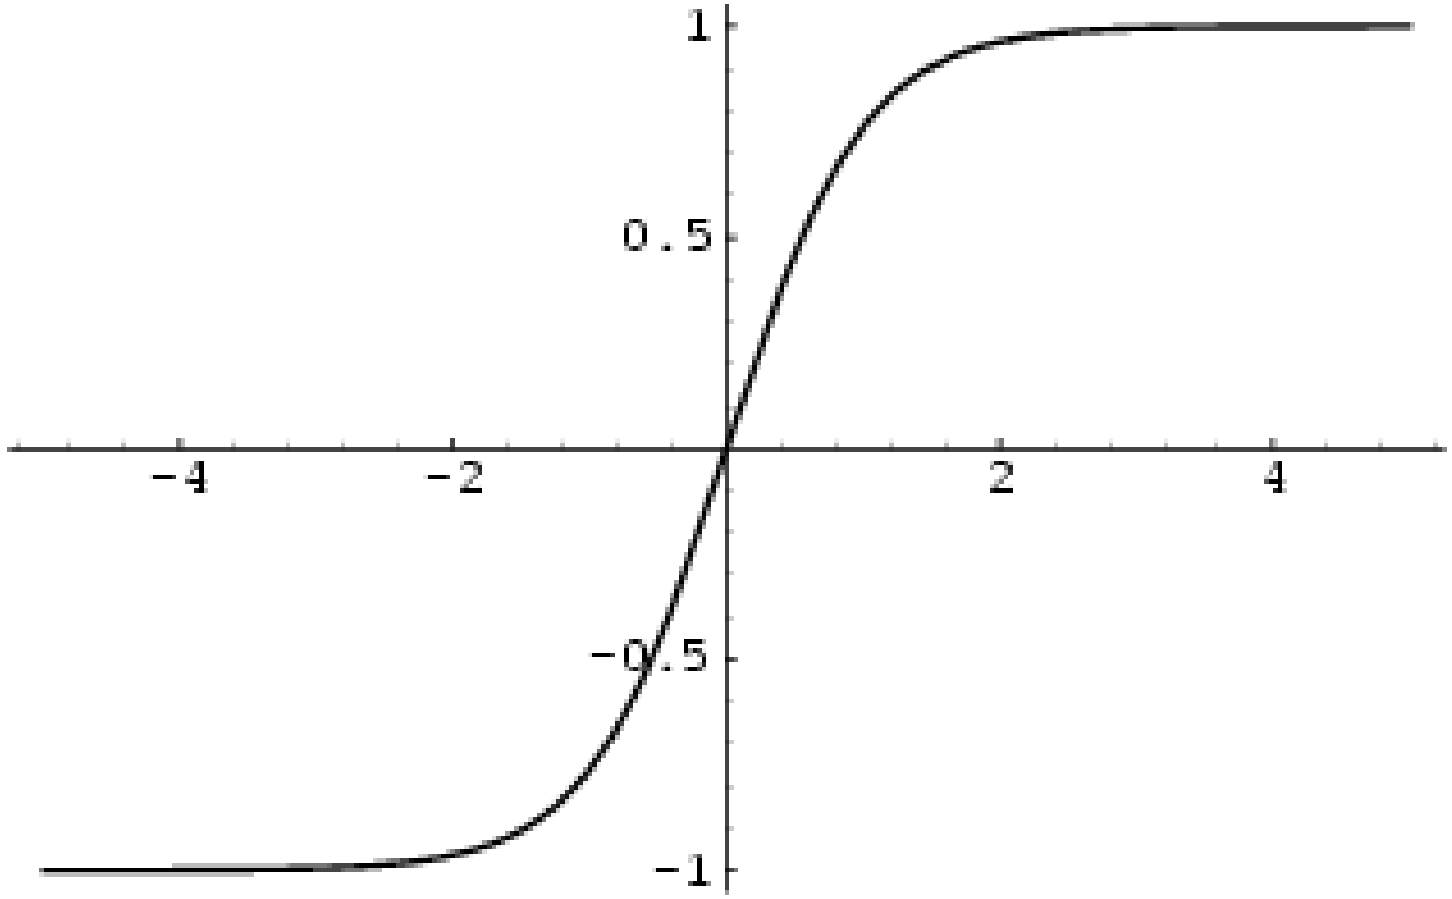
WHAT ABOUT "DEEP" NEURAL NETWORKS?





$$\frac{e^x}{e^x + 1}$$

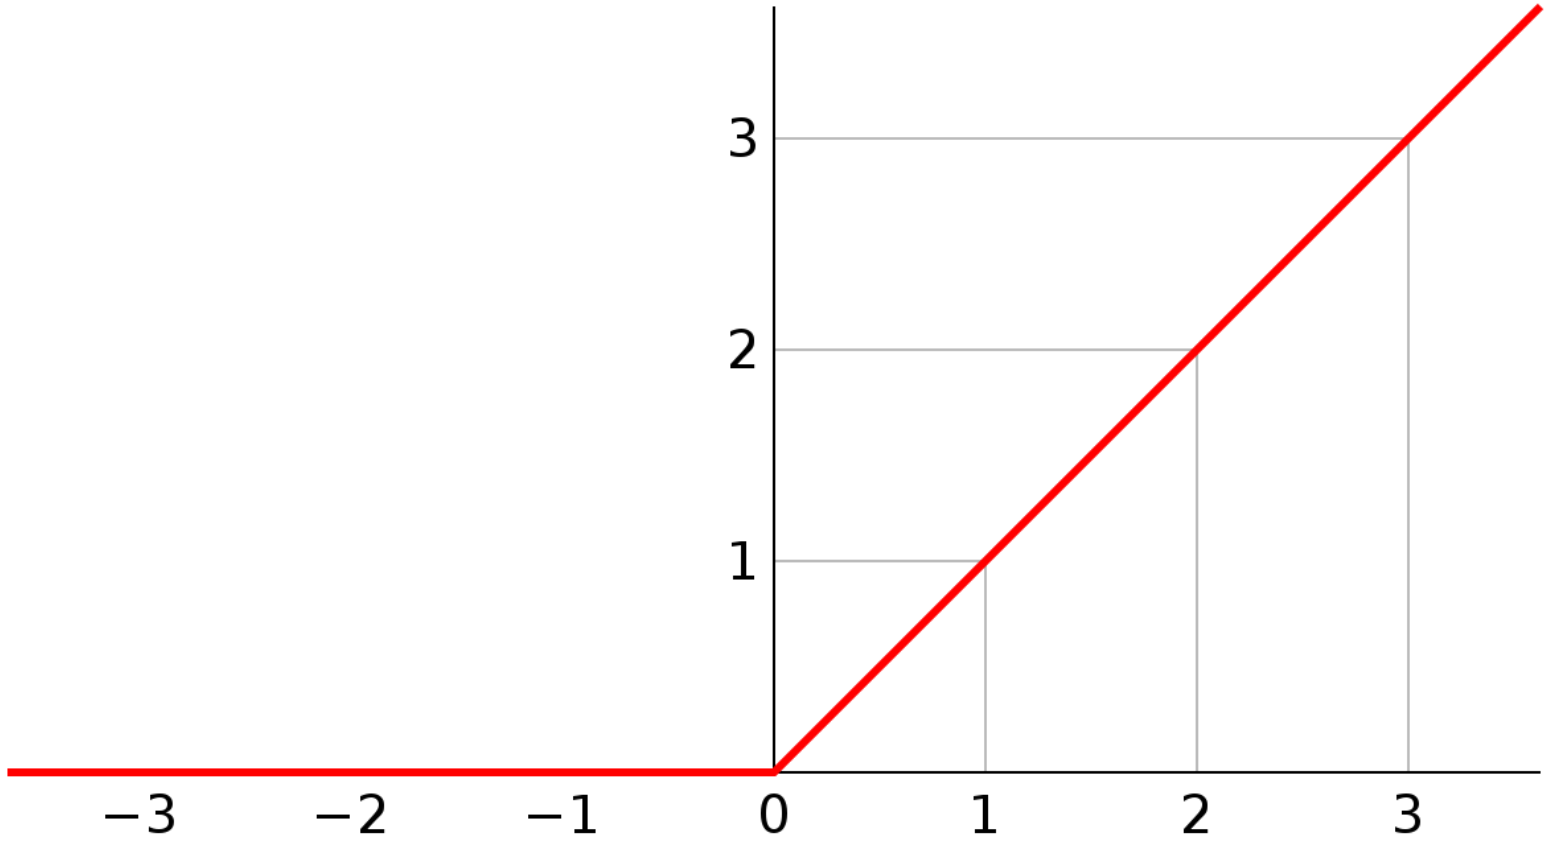
SIGMOID SQUASHING FUNCTION



$$\frac{1 - e^{-2x}}{1 + e^{-2x}}$$

TANH SQUASHING FUNCTION

$$f(x) = x^+ = \max(0, x)$$



RELU SQUASHING FUNCTION

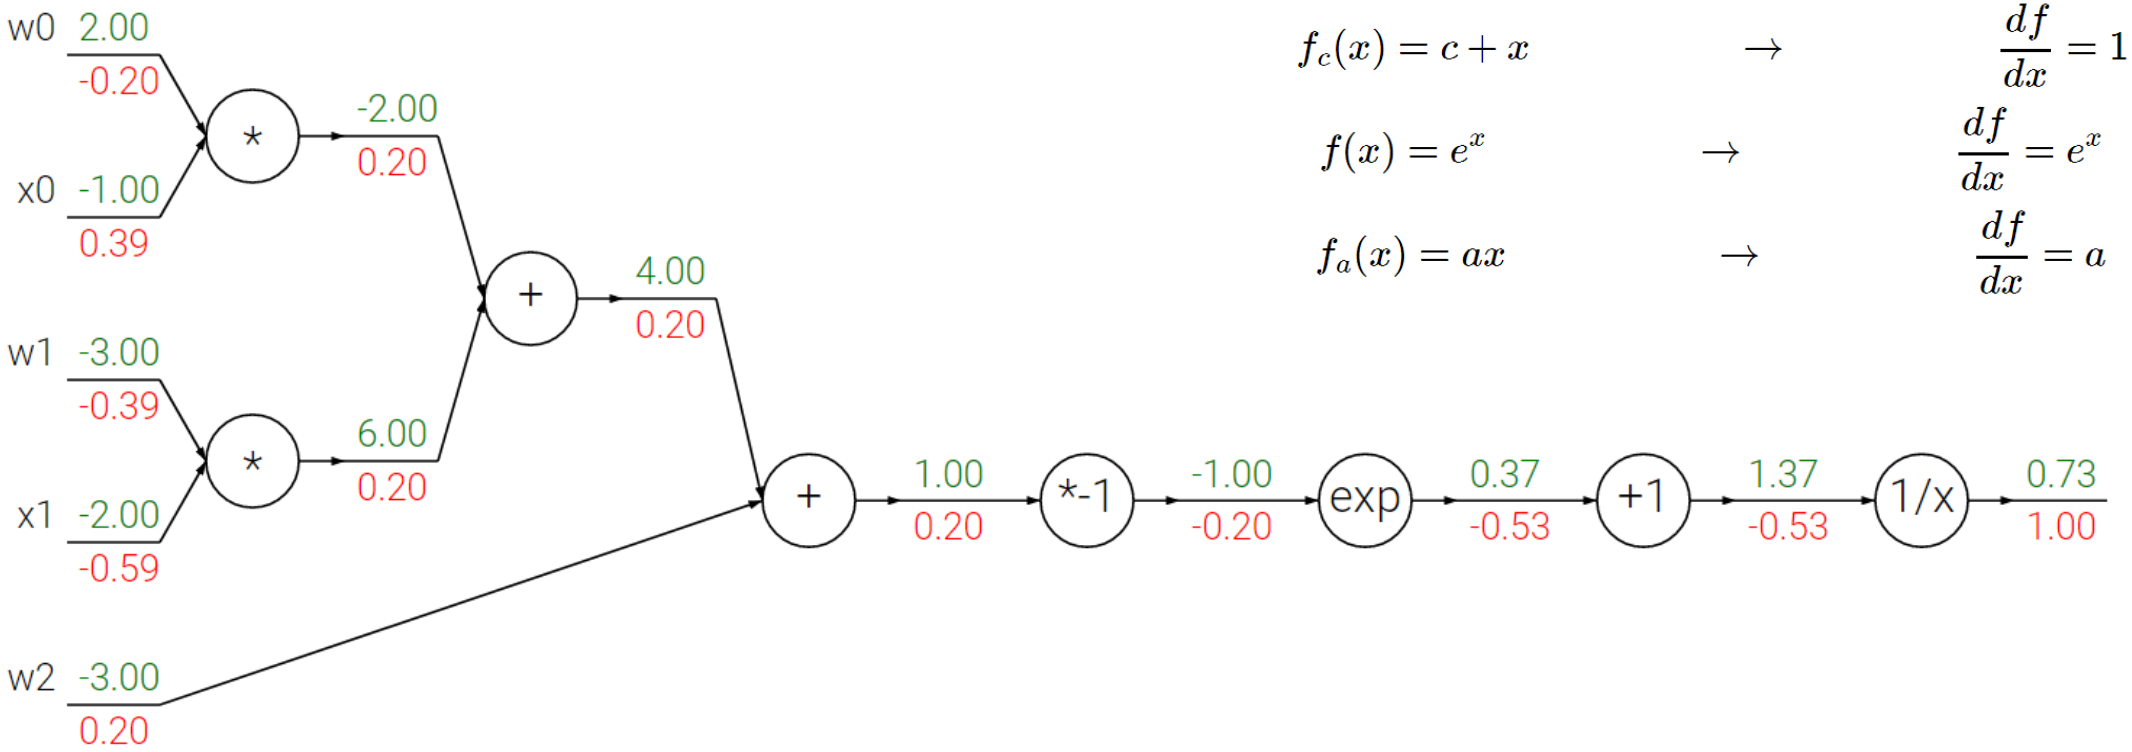
BACKPROPAGATION

$$f(x) = \frac{1}{x} \quad \rightarrow \quad \frac{df}{dx} = -1/x^2$$

$$f_c(x) = c + x \quad \rightarrow \quad \frac{df}{dx} = 1$$

$$f(x) = e^x \quad \rightarrow \quad \frac{df}{dx} = e^x$$

$$f_a(x) = ax \quad \rightarrow \quad \frac{df}{dx} = a$$



$$\frac{\partial E}{\partial w_{jk}}$$

Example circuit for a 2D neuron with a sigmoid activation function. The inputs are [x0,x1] and the (learnable) weights of the neuron are [w0,w1,w2]. As we will see later, the neuron computes a dot product with the input and then its activation is softly squashed by the sigmoid function to be in range from 0 to 1.

Microsoft

$$\Delta w_{jk} = \eta * \left[x_j * \frac{\partial E}{\partial w_{jk}} \right] = \eta * \left[x_j * (o_k - t_k) * o_k * (1 - o_k) \right]$$

learning rate

error e_k

derivative of output activation $\varphi_k{}'$

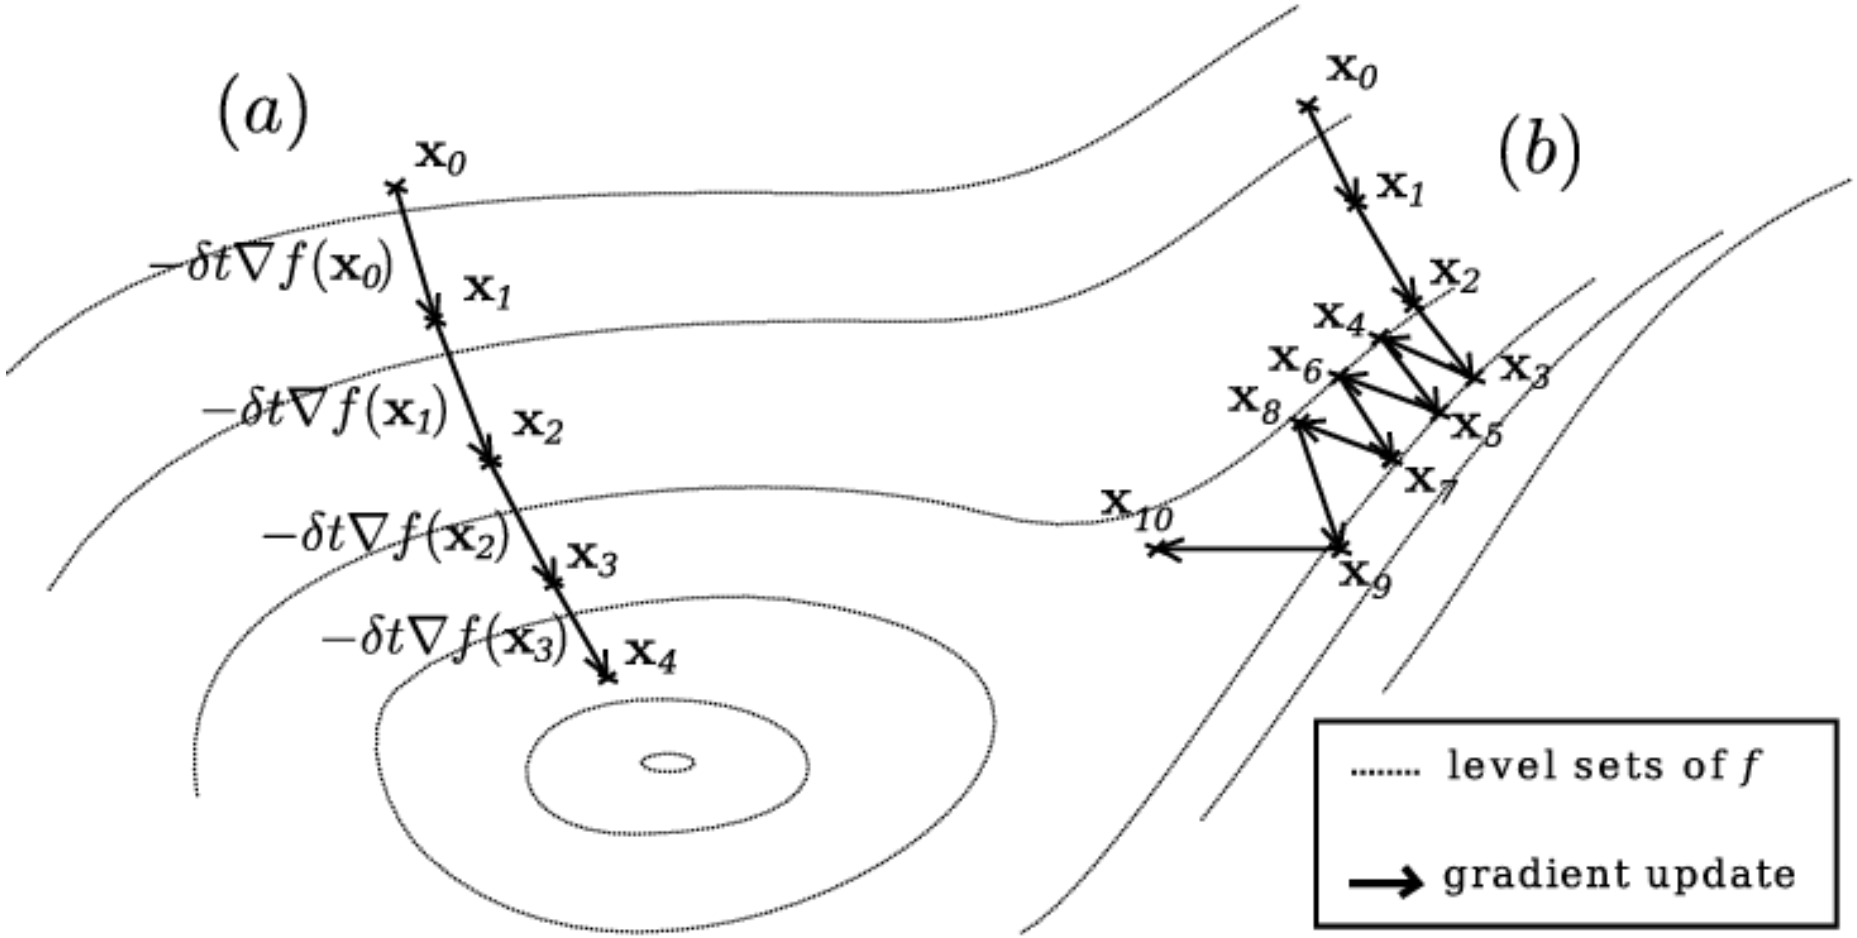
signal δ_k

WEIGHT UPDATE

```
loop maxEpochs times
  for-each training item
    get target values
    compute output values
    compute the gradient of each weight
    use gradient to compute delta for each weight
    update each weight using its delta
  end-for
end-loop
```

BACKPROP ALGORITHM

OPTIMIZATION/GRADIENT DESCENT



WEIGHT UPDATES IN EPOCHS / TRAINING DATA SPLIT INTO MINIBATCHES

NEURAL NETWORK PLAYGROUND

Microsoft

WHAT IS CNTK?

- DECLARITIVELY DESCRIBE AND TRAIN DEEP NEURAL NETWORKS
- DOES ALL THE HARD WORK FOR YOU
- 80% INTERNAL MS DL WORKLOADS USE CNTK
- 1ST CLASS ON LINUX, WINDOWS, DOCKER
- C#, PYTHON, COMMANDLINE
- KERAS BINDINGS

Microsoft

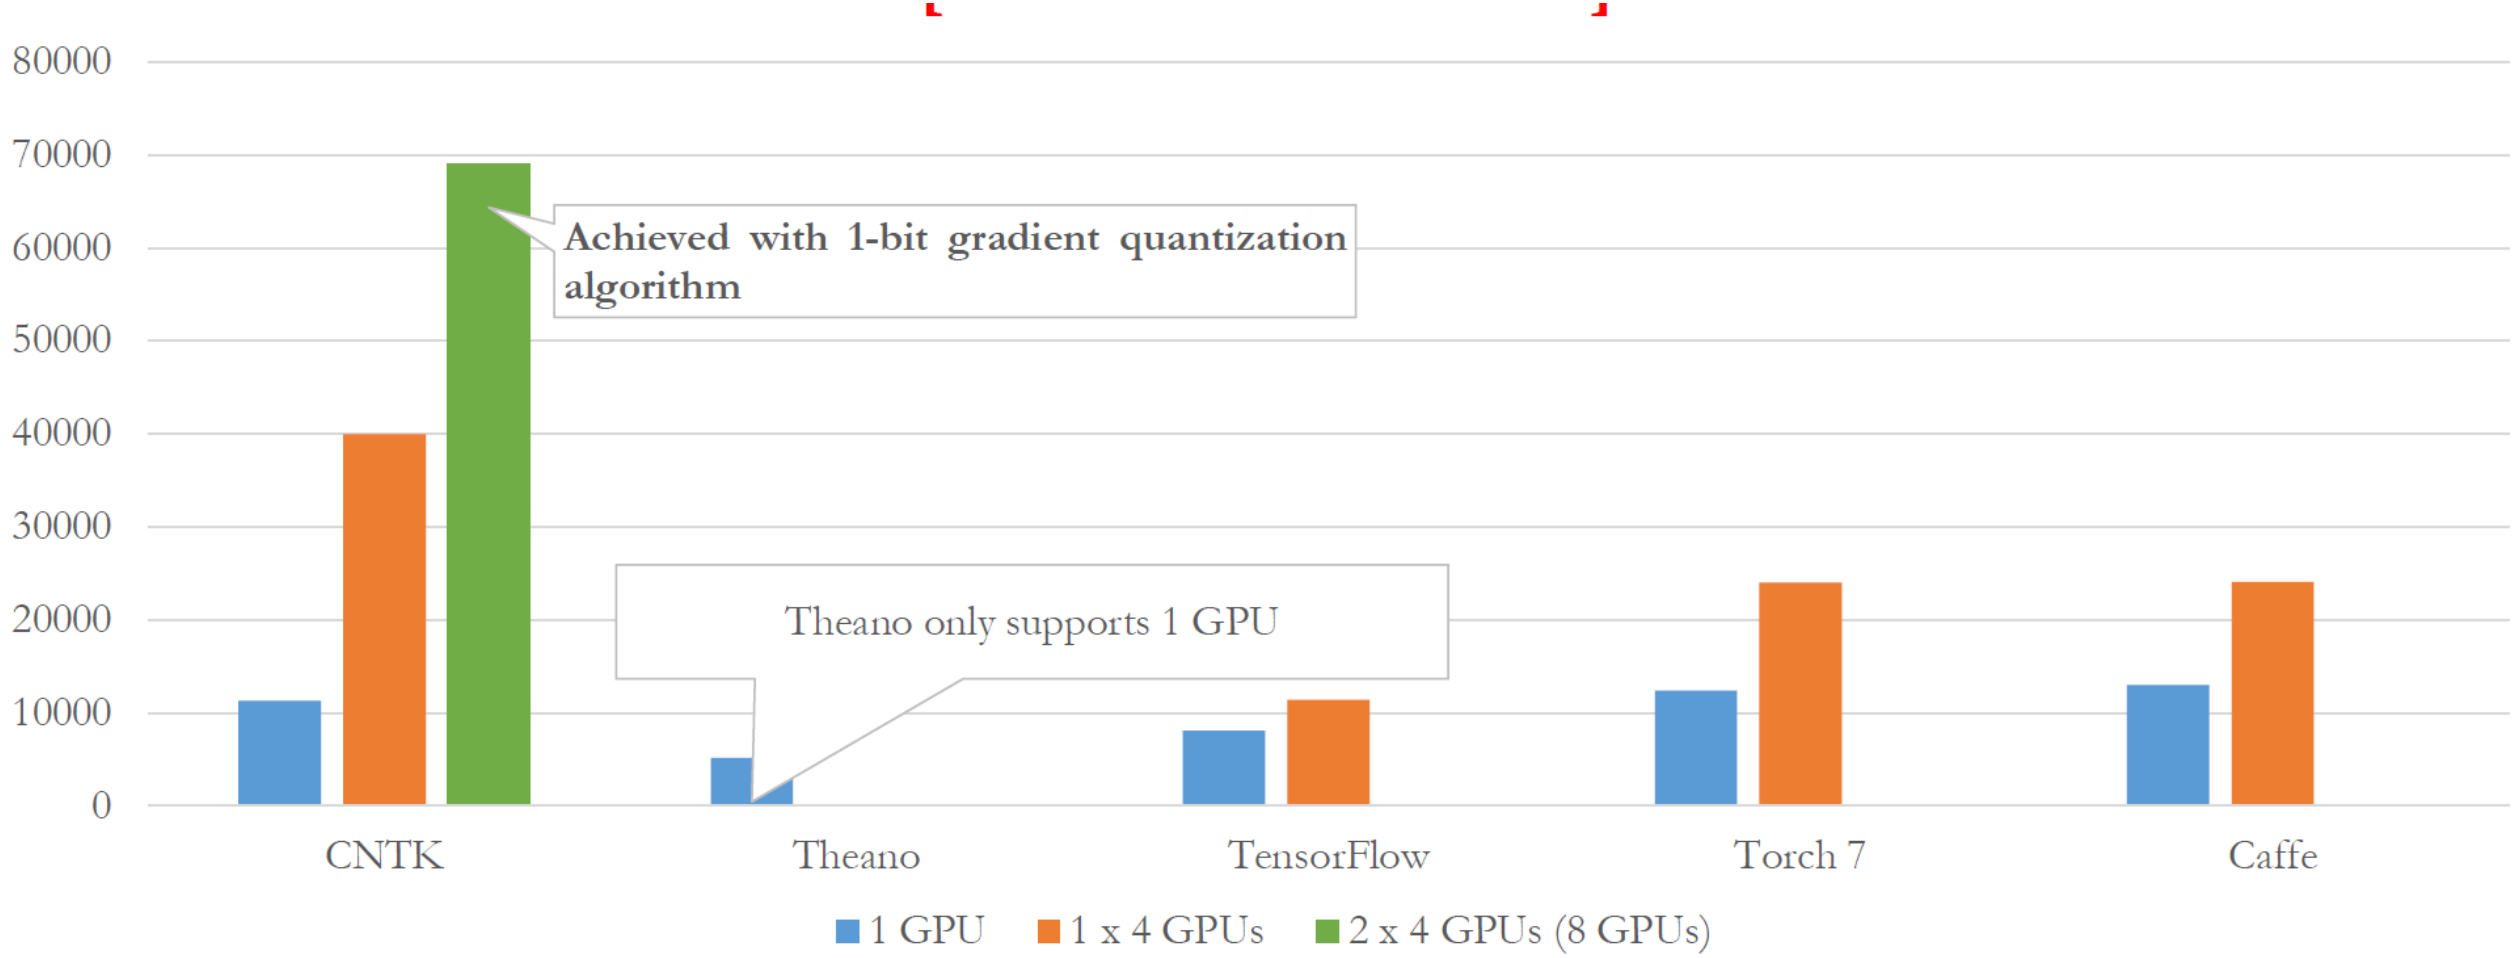
THE FASTEST TOOLKIT



MOST SCALABLE TOOLKIT (2016)

INSTALLING CNTK

- GOOGLE "CNTK INSTALL" (WITH BING)
- USE THE "SCRIPT DRIVEN INSTALLATION"

Microsoft

WHEN TO USE CNTK OVER SIMPLER METHODS

- Sequence modelling (speech, language, time-series etc)
- Transfer learning
- Generative models
- Reinforcement learning
- Object detection and localisation (vision)
- +many more.. ☺

Microsoft

WHEN TO USE DEEP LEARNING FRAMEWORKS

- Sequence modelling (speech, language, time-series)
- Complex vision tasks (localisation, detection)
- Novel prediction architectures
- Generative models
- … and many more!

Microsoft

DEEP LEARNING ON AZURE CLOUD

- Data Science Virtual Machine (Ubuntu and Windows)
- Batch AI Training Service
- AzureML supports some deep learning workloads
- R Server supports some deep learning

Microsoft
